

HEALTHCONNECT CLINIC

Week 7 Testing & Refinement — Evidence Pack

Data Analytics Track

Improving Patient Appointment Attendance and Healthcare Support Using Data and AI

AnalystLab Africa Experience Lab Internship Programme

Week 7

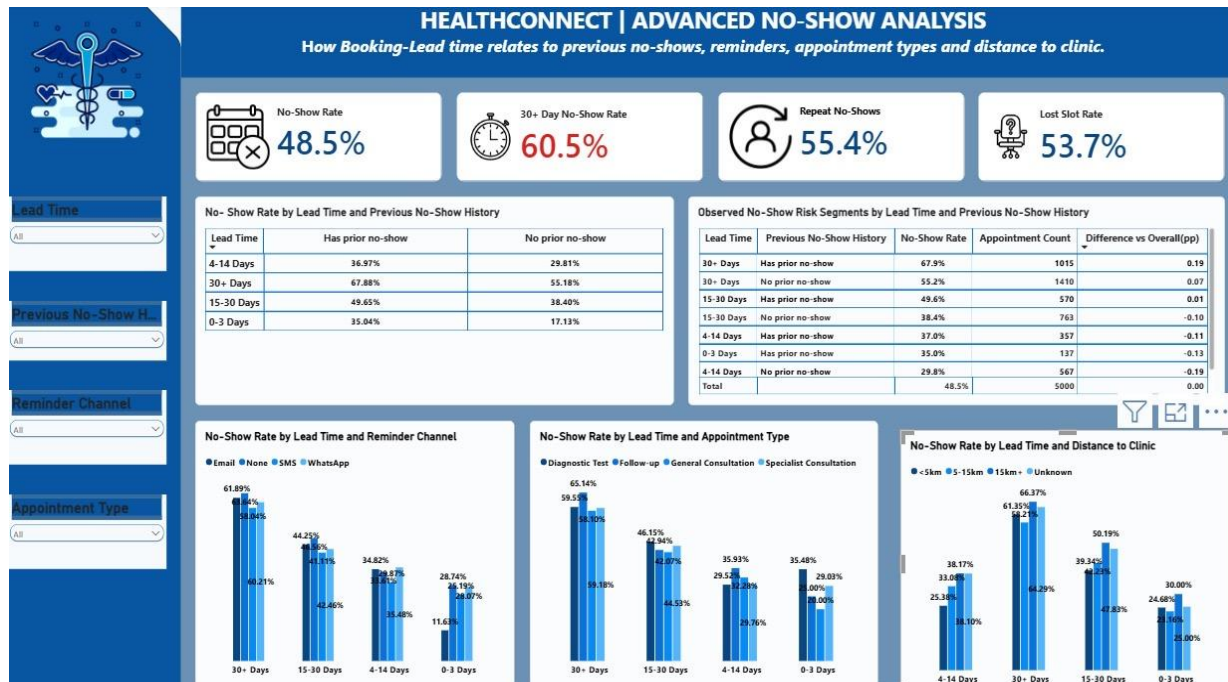

Companion document for screenshot evidence.

Purpose

This evidence pack contains the screenshot evidence referenced in the Week 7 Analytics Testing & Refinement Report. Insert the relevant Power BI, DAX or collaboration screenshots in the spaces provided. Keep the evidence IDs unchanged so they remain aligned with the main report.

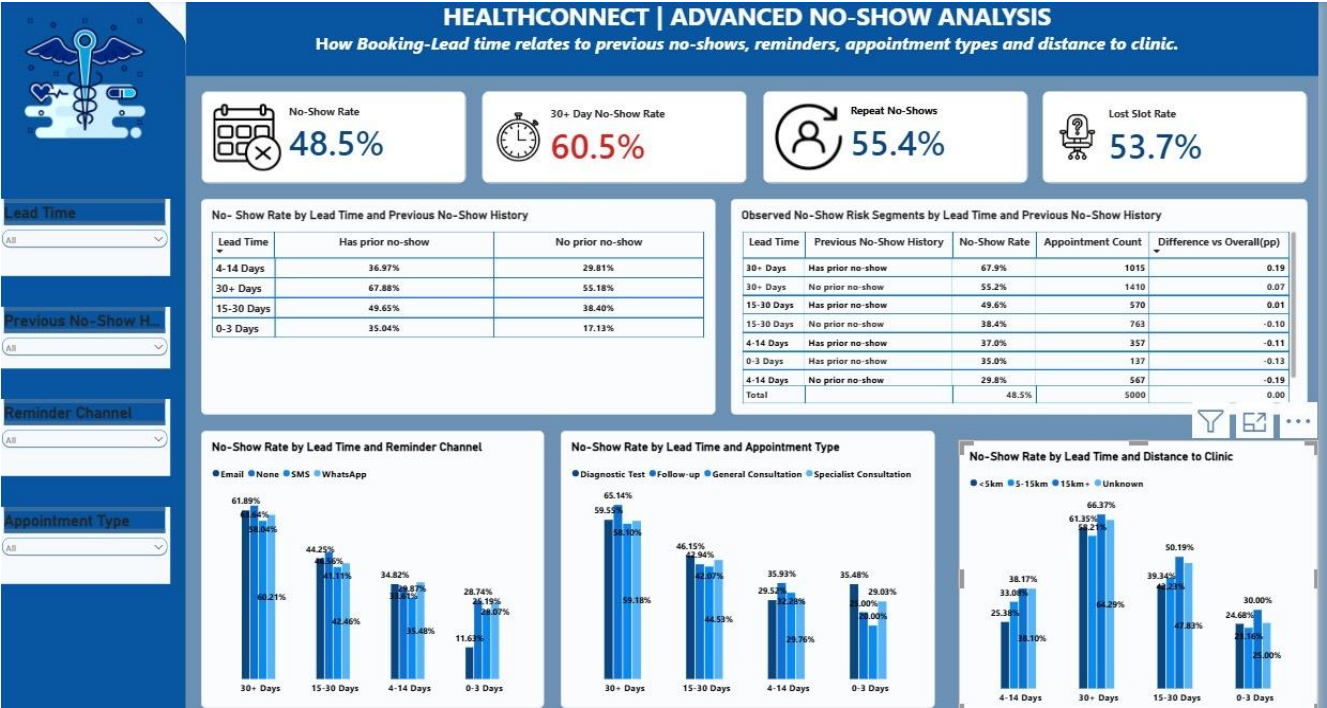

E01 — Final Refined Dashboard

Evidence of the final Week 7 dashboard arrangement, interactive slicers and clarified KPI presentation.

E02 — Default / All-Filter Dashboard State

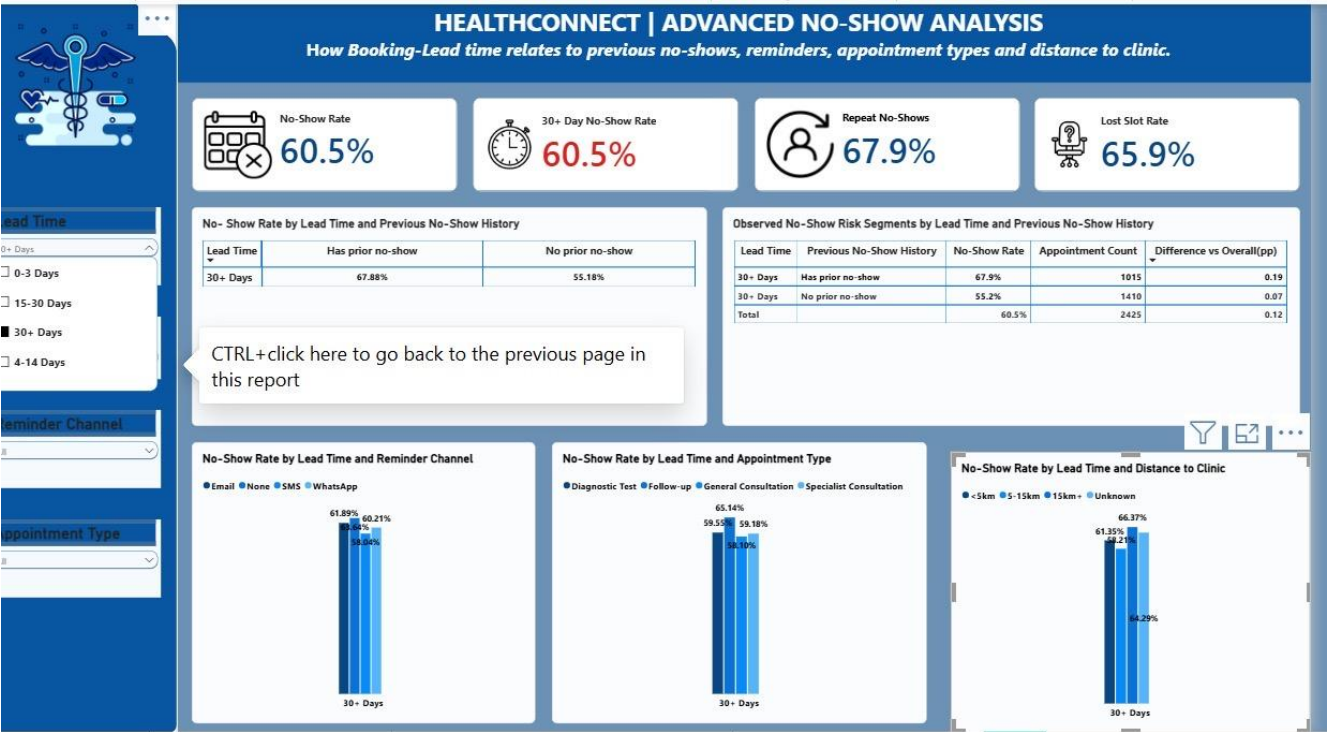

Evidence of the dashboard baseline state before applying a specific slicer selection.

The four baseline KPIs are visible before applying the slicers: 48.5% overall no-show, 60.5% 30+ day no-show, 55.4% repeat no-show and 53.7% lost slot. This screenshot also reflects the corrected distance-to-clinic category sort order (<5km, 5-15km, 15km+, Unknown), applied after the distance sort-order issue identified in Week 7 testing.

E03 — Lead Time = 30+ Days

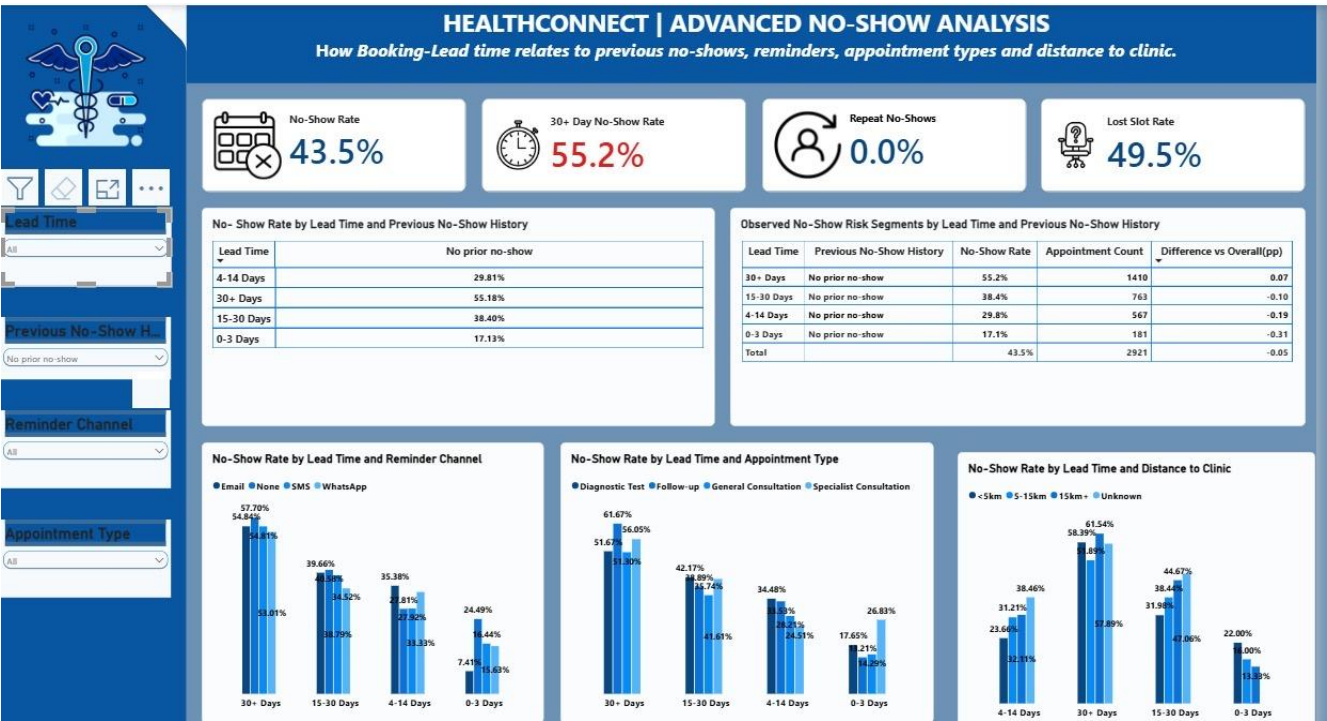

Evidence that the dashboard responds correctly when Lead Time is filtered to 30+ days.

Expected values: No-show Rate 60.5%, Repeat No-Show Rate 67.9% and Lost Slot Rate 65.9%.

E04 — Previous No-Show = No Prior No-Show

Evidence of the corrected Repeat No-Show KPI response.

E05 — DAX Before and After Refinement

Evidence of the identified KPI issue and the DAX refinement used to resolve it.

Dax Before Refinement

1 Repeat No-Show Rate = CALCULATE([No-Show Rate],HealthConnect_Appointment_Data[Previous No-Show History]="Has prior no-show")

patient_id	gender	age	age_group	appointment_type	booking_date	appointment_date	appointment_date
P-0353	Female	58	55-64	Follow-up	Thursday, January 8, 2026	Friday, March 6, 2026	Friday

Dax after Refinement

1 Repeat No-Show Rate = VAR SelectedHistory = SELECTEDVALUE('HealthConnect_Appointment_Data'[Previous No-Show History]) RETURN SWITCH(SelectedHistory, "No prior no-show", 0, "Has prior no-show", DIVIDE(CALCULATE([Total Appointments], 'HealthConnect_Appointment_Data'[previous_no_shows] > 0, 'HealthConnect_Appointment_Data'[appointment_outcome] = "No-Show"), CALCULATE([Total Appointments], 'HealthConnect_Appointment_Data'[previous_no_shows] > 0), 0), DIVIDE(CALCULATE([Total Appointments], 'HealthConnect_Appointment_Data'[previous_no_shows] > 0, 'HealthConnect_Appointment_Data'[appointment_outcome] = "No-Show"), CALCULATE([Total Appointments], 'HealthConnect_Appointment_Data'[previous_no_shows] > 0), 0))

patient_id	gender	age	age_group	appointment_type	booking_date	appointment_date	appointment_date
P-0353	Female	58	55-64	Follow-up	Thursday, January 8, 2026	Friday, March 6, 2026	Friday

The original measure forced a filter on 'Previous No-Show History' = "Has prior no-show" and did not respond correctly to the no-prior-no-show selection. The refined measure recognises the selected history context and was re-tested successfully.

E07 — Distance-to-Clinic Sort Order Fix

Evidence that the distance-to-clinic category sort-order issue identified during Week 7 testing has been corrected. A custom sort order was applied in Power Query so the category order now reads <5km, 5-15km, 15km+, Unknown across all lead-time segments. The corrected order is visible in the E02, E03 and E04 screenshots above, all captured after the fix was applied; underlying no-show rate values are unchanged from the pre-fix figures independently validated earlier in this pack.

E06 — Data Science Cross-Track Validation

To document the Week 7 cross-track collaboration and provide evidence of the Analytics-side validation of the Lead Time × Previous No-Show interaction. This evidence does not claim an unconfirmed Data Science model improvement.

Evidence Summary

Integration Theme: Lead Time × Previous No-Show History

Primary Track: Data Analytics

Collaborating Track: Data Science

Week 7 Status: Analytics-side validation completed

Data Science Status: Further response pending

Validated Finding: Within the 30+ day group, appointments with previous no-show history recorded a 67.9% observed no-show rate, compared with 55.2% for appointments without previous no-show history. The overall no-show baseline was 48.5%.

Cross-Track Handoff: Data Science had previously indicated that booking lead days and historical no-show rate were treated as independent signals and that a Lead Time × Previous No-Show interaction could be tested as a candidate feature.

Week 7 Action: The Analytics track rechecked the two segments using the refined dashboard filters. The rates remained consistent, so the interaction finding was retained as an analytical input for cross-track use.

Collaboration Status: Analytics-side validation is complete. No additional Data Science model-performance result was available at the time of submission. The remaining step is for Data Science to evaluate the interaction through its established modelling and evaluation process.

Documentation Note: This evidence is based on the Week 7 cross-track validation document and the collaboration carried forward from Week 6. It is intentionally presented as documentary evidence rather than a screenshot of a new Data Science response.

Evidence Pack Checklist

- E01 inserted — Final refined dashboard
- E02 inserted — Default / All-filter state
- E03 inserted — Lead Time = 30+ days

- E04 inserted — No prior no-show; Repeat No-Show = 0.0%
- E05 inserted — DAX before/after refinement
- E06 inserted — Data Science cross-track evidence
- E07 inserted — Distance-to-clinic sort order fix, confirmed in E02/E03/E04
